Dependencies

The tools build upon a number of existing projects and libraries. In addition, common functionalities of the T3Q and T3D tools are delegated to the T3Tools Common Components package for reuse. All the necessary dependencies are included in the repository and the packaged distributions. The use of newer versions of the required libraries is possible, however only the included versions have been tested and known to work.

Building and Packaging

For development and building, it is necessary to checkout the required TRex components as well as the T3Tools common components from the repository. In addition, ?ANTLRv2, ?Apache ANT, and the ?Nullsoft Scriptable Install System (NSIS) (included) are needed for building and packaging. See the build and packaging page for further detailed instructions on how to build and package the tools.
